

Power System Analysis by

DIGSILENT

Software

By:

Ali Parizad

Science Center Publication

Main Entry: Parizad, Ali, 1983

Title and author: Power System Analysis by DIgSILENT Software, By: Ali Parizad

Publication Specifications: Tehran, Atra Publication 2014

Appearance Specifications: 507 Pages., Illustrated, Table, Graph

ISBN: 9786006425238;

Listing status: FIPA

Subject: Power - Systems - Software

Subject: Electric Power Systems – Network - Software

Congressional Classification: TK1005/P4B4 2014

Dewey Decimal Classification: 317/621

National Bibliographic Number: 3579303

.....

Book Title: Power System Analysis by DIgSILENT Software

Publication: Atra Publication

Co. Publisher: Science Center Publication

By: Ali Parizad

Editor: Science Center Publication

Cover Designer: Parizad, Masjedi

First Publication: 2014 Autumn

Circulation: 1000

Printing and binding: Ata, Kimia

Price with CD Cost: 36000 T

Reproduction or re-production of all or part of this book, including printing, photocopying, any kind of dissemination in Internet and websites, the provision of CDs and DVDs, is prohibited. Distribution Centers:

Science Distribution: Enghelab Street, FakhR Razi St., East Azarbaijan St., No. 65, Unit 1

Telephone: (021)-66961568-66494911

Atra Publishing and broadcasting: Enghelab Square, South Jamalzadeh Street, Shahid Aghassabori Avenue, No. 13

Telephone: (021)-66922082

Contents of Power System Analysis by DIgSILENT Software

Chapter 1: Installation and Working with DigSILENT	1
1-1. DigSILENT Software Installation	1
1-2. Execution of Software.....	4
1-3. Defining a Project	5
1-3-1. Main Tool Bar	7
1-3-2. Drawing Tool Bar.....	11
1-4. Importing Power System Equipment to Graphical Window.....	11
1-4-1. Drawing Power System Equipment to Graphical Window	11
1-5. Import Project to Software.....	12
1-6. Export Project to Computer	12
Chapter 2: User Settings	13
2-1. Introduction.....	13
2-2. User Settings.....	13
2-2-1. General Settings.....	14
2-2-2. Graphic Windows Settings	14
2-2-3. Data Manager Settings	15
2-2-4. Output Window Settings	17
2-2-5. Functions Settings	17
2-2-6. Directions	18
2-2-7. Editor Settings	18
Chapter 3: Graphic Windows	21
3-1. Graphical Toolbox	21
3-2. Adding New Power System Elements in Graphical Page.....	22
3-2-1. Marking and Editing Power System Elements	24
3-2-2. General Graphical Settings	25
3-2-3. Graphical Settings	26
3-2-4. Switches Settings Page	29
3-2-5. Text Boxes Settings Page	30
3-2-6. Graphic Layers	31
3-3. Color Representation	34
3-3-1. Title Block	36
3-3-2. Legend Block.....	36
3-4. Result Boxes	37
3-4-1. Editing Result Boxes	38
3-4-2. 3 Formatting Result Boxes	41
Chapter 4: Data Manager	43
4-1. Introduction.....	43
4-2. Data Manager Page.....	43
4-2-1. Moving in the Database Tree.....	44
4-3. Adding a New Item	44
4-3-1. Deleting an Item	45
4-4. Cut, Copy, Paste and Move Objects	45
4-5. Searching for Equipment and Object in Data Manager Page.....	46
4-5-1. Sorting Objects	47
4-5-2. Searching by Name of Equipment.....	48
4-5-3. Using Filters for Search	48
4-5-4. Editing Data Objects in the Data Manager	50
4-5-5. Editing in Object Mode	50
4-5-6. Editing in "Detail" Mode	51
4-5-7. Copy and Paste while Editing.....	52
4-6. The Input Window in the Data Manager.....	52
4-6-1. Input Window Commands.....	52
4-7. Spreadsheet Format Data Import/Export	52
4-8. Export to Spreadsheet Programs	53
4-9. Import from Spreadsheet Programs	53
4-9-1. Import Numerical Data from Excel to DigSILENT	54
4-10. Import Equipment and Parameters from Excel to DigSILENT	54

Chapter 5: Study Cases	57
5-1. Introduction.....	57
5-2. Create New Study Case.....	57
5-2-1. Adding New Network to Study Case	59
Chapter 6: Parameter Characteristics	61
6-1. Introduction.....	61
6-2. Defining Scalar Characteristics.....	61
6-2-1. Defining Discrete Time Characteristics.....	63
6-2-2. Defining Discrete Parameter Characteristics.....	64
6-2-3. Defining Continuous Parameter Characteristics.....	65
6-2-4. Defining Frequency Parameter Characteristics	67
6-2-5. Defining Time Parameter Characteristics.....	68
6-2-6. Defining Two-dimensional Parameter Characteristics.....	69
Chapter 7: Virtual Instruments	71
7-1. Virtual Instrument Panels (VIS)	71
7-1-1. Creating Virtual Instruments(.....	73
7-1-2. Virtual Instrument Studies.....	73
7-1-3. Feeder Definition.....	74
7-1-4. Harmonic Curves.....	74
7-1-5. Modal Analysis Curve.....	74
7-1-6. Subplots	74
7-1-7. Editing Subplots	75
7-1-8. Y Axes Settings	75
7-1-9. Curves Selection.....	76
7-1-10. X Axes Settings	76
7-1-11. Vector Diagram	78
7-1-12. Voltage Profile Plot	78
Chapter 8: Load-Flow Calculations	79
8-1. Introduction.....	79
8-2. Load Flow Calculation in Power System Planning and Operation.....	79
8-2-1. Normal Condition.....	81
8-2-2. Emergency Condition.....	81
8-3. Network Representation and Calculation Methods.....	81
8-3-1. Bus bur Types.....	82
8-3-2. AC Load Flow	82
8-3-3. DC Load Flow	83
8-4. Active and Reactive Power Control.....	83
8-4-1. Active Power Control.....	83
8-4-2. Advanced Load Options	87
8-4-3. Feeder Scaling	88
8-4-4. Load Scaling.....	90
8-4-5. Low-Voltage Loads.....	91
8-4-6. Temperature Dependency of Lines and Cables	91
8-5. Executing Load Flow Calculations	93
8-5-1. Basic Options.....	93
8-5-2. Active Power Control.....	95
8-5-3. Advanced Options	99
8-5-4. Iteration Control	101
8-5-5. Output.....	103
8-5-6. Low Voltage Analysis	104
8-5-7. Advanced Simulation Options.....	106
8-6. Viewing Results in the Single Line Diagram.....	106
8-7. Output Calculation	107
8-8. Diagram Coloring	107
8-9. Load Flow Sign Convention	108
8-10. Troubleshooting Load Flow Calculation Problems	109
8-10-1. General Troubleshooting Handling	109
8-10-2. Data Model Problem for Entered Data	110
8-10-3. Load Flow Calculation Messages.....	111

8-10-4. Too Many Inner Loop Iterations	112
8-10-5. Too many Outer Loop Iterations	113
8-10-6. Tap Hunting (Up and Down).....	114
8-11. Load Flow Calculation Methods.....	116
8-11-1. Gauss–Seidel Method.....	118
8-11-2. Newton-Raphson Method.....	120
8-12. DC Load Flow.....	122
Chapter 9: Short-Circuit Analysis	125
9-1. Introduction.....	125
9-2. Short Circuit Studies	125
9-2-1. RL Circuit for Transient Studies	126
9-3. Dependency of Short Circuit to Time	128
9-4. Symmetrical Components.....	130
9-4-1. Concept of Symmetrical Components	130
9-4-2. Calculation of Impedances for Different Components.....	131
9-5. Calculation of Sequence Impedances	132
9-6. Sequence Networks.....	133
9-6-1. Sequence Networks for No-Load Synchronous Generator.....	133
9-6-2. Sequence Impedances for Overhead Lines and Transformers.....	134
9-6-3. Zero Sequence Networks.....	135
9-7. Short Circuit Types	137
9-7-1. Single Phase-to-Ground Short Circuit (No Load Generator)	137
9-7-2. Phase-to-Phase Short Circuit (No Load Generator)	139
9-7-3. Two Phase-to-Ground Short Circuit (No Load Generator)	140
9-8. Short Circuit via an Impedance.....	143
9-8-1. Three-Phase Short Circuit via an Impedance	143
9-8-2. Single Phase-to-Ground Fault (Short Circuit) via an Impedance	143
9-8-3. Double-Phase to Ground Short Circuit	144
9-9. Models of Equipment in Short Circuit Studies	145
9-9-1. External Grid Model.....	145
9-9-2. Line and Cable Models in Short Circuit Studies	145
9-9-3. Two Winding Transformer Model in Short Circuit Studies	146
9-9-4. Three Winding Transformer Model in Short Circuit Studies	146
9-9-5. Short-Circuit Limiting Reactors in Short Circuit Studies.....	147
9-9-6. Synchronous Machine Model in Short Circuit Studies	147
9-9-7. Asynchronous Machine Model in Short Circuit Studies	148
9-9-8. Load and Shunt Compensator Models in Short Circuit Studies	148
9-10. The IEC 60909/VDE 0102 Method	149
9-11. Correction Factors in IEC 60909	151
9-11-1. Voltage Factor	151
9-11-2. Impedance Correction Factors for IEC.....	152
9-12. Changes from IEC60909:1988 to IEC60909:2001	156
9-12-1. Correction Factor for Generator/Transformer	156
9-12-2. Correction Factor for Synchronous Generator	156
9-12-3. Correction Factor for Substation	156
9-12-4. Maximum Cable Temperature for the Calculation of the Minimum Short-Circuit Current	156
9-12-5. Voltage Correction Factor for Low Voltage Systems (400/230 V).....	157
9-12-6. Consideration of the Fault Contribution of Asynchronous Machines	157
9-12-7. Standardization of New Calculation Methods.....	157
9-13. Short-Circuit Currents in the Different Time Domains (IEC)	157
9-13-1. Classification of the Source of Short-Circuits	157
9-13-2. Initial Symmetrical Short-Circuit Current I_K'' for IEC	158
9-13-3. Peak Short-Circuit Current According to IEC 60909.....	158
9-14. DC Component of the Short-Circuit Current i_{dc}	160
9-15. Symmetrical Short-Circuit Breaking Current I_b	160
9-15-1 Far-From-Generator Unbalanced Short Circuit.....	160
9-15-2. Near-To-Generator Balanced Short Circuit.....	160
9-15-3. Three-Phase Short Circuit in Non-Meshed/Meshed Networks	160
9-16. Steady-State Short-Circuit Current (I_k)	161

9-16-1. Unsymmetrical Faults Far from the Generator	161
9-16-2. Symmetrical Faults Near to the Generator (single source).....	161
9-16-3. Near-To-Generator Fault (Non-Meshed Network from Several Sources).....	162
9-16-4. Near-To-Generator Fault (Meshed Network from Several Sources).....	162
9-17. Thermal Equivalent Short-Circuit Current (I_{th}).....	162
9-18. Earthing of Distribution Networks.....	162
9-19. ANSI Method.....	163
9-20. Total and Symmetrical Current Rating Basis of Circuit Breakers and Fuses according to ANSI Standards	164
9-21. Complete Method for Short Circuit Calculation.....	165
9-22. Executing Short-Circuit Calculations	167
9-22-1. Faults on Busbars/Terminals	168
9-22-2. Faults on Lines and Branches	169
9-22-3. Multiple Faults Calculation	169
9-23. Short-Circuit Executing Page.....	171
9-23-1. Basic Options (All Methods).....	171
9-23-2. Verification.....	174
9-23-3. Basic Options (IEC 60909/VDE 0102 Method)	174
9-23-4. Advanced Options (IEC 60909/VDE 0102 Method).....	175
9-23-5. Basic Options (ANSI C37 Method).....	177
9-23-6. Advanced Options (ANSI C37 Method)	179
9-23-7. Basic Options (Complete Method).....	180
9-23-8. Advanced Options (Complete Method).....	182
9-23-9. Basic Options (IEC 61363)	183
9-23-10. Advanced Options (IEC 61363).....	184
9-24. Result Analysis	186
9-25. Showing Results in the Output Window.....	188
Chapter 10: RMS/EMT Simulations	189
10-1. Introduction.....	189
10-2. Transient Studies.....	189
10-3. Stability Types	191
10-4. Calculation Methods	192
10-4-1. Balanced RMS Simulation	192
10-4-2. Unbalanced RMS Simulation	193
10-4-3. EMT Simulation	195
10-4-4. Initializing.....	196
10-4-5. Even Definition	202
10-4-6. Defining Results *Elm and Variable Set.....	208
10-4-7. Output Plots Definition.....	209
10-5. Models for Stability Analysis	210
10-6. System Modelling Approach	210
10-6-1. Composite Frame.....	212
10-6-2. Block Definition	216
10-6-3. Common Model.....	222
10-6-4. Composite Model	225
10-6-5. Slot Update	228
10-6-6. Step Response.....	228
Chapter 11: Network Studies for IEEE 9 Bus Test System	231
11-1. Introduction.....	231
11-2. IEEE 9-Bus Test System.....	231
11-3. Create a Project.....	233
11-4. Implementation of Power Equipment in 9-Bus System.....	234
11-4-1. Bus Bars.....	234
11-4-2. Lines	235
11-4-3. Transformers.....	236
11-4-4. Generators.....	237
11-4-5. Loads	237
11-5. Data Entry for Equipment.....	238
11-5-1. Bus Data	238
11-5-2. Transformer Data.....	241

11-5-3. Line Data	243
11-5-4. Load Data	246
11-5-5. Generator Data.....	248
11-6. Load Flow Execution.....	251
11-6-1. Load Flow Results in Results Box	255
11-6-2. Magnification in Single Line Diagram.....	255
11-6-3. Results in Output Window	256
11-6-4. Reporting Desired Network Parameters in the Result Box	259
11-6-5. Editing Results Box.....	261
11-7. How to Compare Results in two Networks.....	261
11-8. Creating Common Bus for two Networks.....	263
11-9. Creating Common Line for two Networks.....	264
11-10. Voltage Profile.....	265
11-11. Voltage and Reactive Power Compensation.....	267
11-11-1. Voltage Compensation with Parallel Capacitor.....	267
11-11-2. Solving Voltage Drop Problem (Manually)	268
11-11-3. Solving Voltage Drop Problem (Automatically).....	269
11-11-4. Voltage Compensation with Tap Changer.....	270
11-11-5. Voltage Compensation with Tap Changer (Manually).....	270
11-11-6. Voltage Compensation with Tap Changer (Automatically).....	272
11-12. Short Circuit Analysis in IEEE 9 Bus System	274
11-12-1. Short Circuit Study on Bus 7.....	275
11-12-2. Short Circuit Study on Line 6-9	276
11-13. Motor Starting Study in IEEE 9 BUS	280
11-14. Motor Starting Simulation	285
11-14-1. Defining Load For Motor	286
11-14-2. Defining Motor Driven Machin (MDM).....	288
Chapter 12: Dynamic Studies for IEEE 9 Bus Test System	291
12-1. Introduction.....	291
12-2. IEEE 9 Bus Test System in Dynamic Studies.....	291
12-3. Data Entry for Dynamic Parameters of Generator.....	291
12-4. Transient Simulation.....	294
12-4-1. Initial Condition Settings.....	294
12-4-2. Event Definition	295
12-4-3. Defining Variable Set to Show Results	299
12-4-4. Time Domain Simulation and Results.....	301
12-4-5. Simulation Execution	303
12-4-6. Output Window Results.....	308
12-5. Dynamic Studies Considering Controllers.....	310
12-6. Adding Controllers to System.....	310
12-6-1. Simulation Results.....	314
12-7. Update Composite Model Using Slot Update.....	315
12-8. Step Response Test for Model Verification.....	316
Chapter 13: Load Modeling	319
13-1. Introduction.....	319
13-2. Defining Load in Load Flow Tab	320
13-2-1. Balanced Load-Flow.....	321
13-2-2. Unbalanced Load-Flow	321
13-3. Different Types of Load Technologies	321
13-3-1. DC loads.....	322
13-4. Voltage dependency.....	323
13-5. Load Scaling Factor	324
13-6. Short Circuit Menu for Load.....	325
13-7. Defining Load for Harmonic Analysis.....	326
13-7-1. Passive Loads	326
13-7-2. Harmonic Current Injections	327
13-8. RMS Simulation for Load (Transient Stability).....	328
13-9. EMT Simulation.....	330
13-10. Load Modeling in Power System.....	331
13-10-1. Exponential Load Model	331

13-10-2. Dependency Coefficient of Active Loads to Vol. /Frequency....	331
13-10-3. Dependency Coefficient of Reactive Loads to Vol. /Frequency	332
13-11. Calculation of Dependency Coefficient for Resistive-Inductive Load	333
13-11-1. Modeling of Motor Load	334
13-11-2. Aggregated Load	336
13-11-3. Load Modeling by Measuring Method.....	337
13-11-4. Classic-Voltage Model of Load.....	337
13-11-5. Classic-Frequency Model of Load	337
13-11-6. Time Dependency Model of Load.....	339
13-12. Load Factor	339
Chapter 14: Transformer Modeling	341
14-1. Introduction.....	341
14-2. Transformer Parameters.....	341
14-2-1. Transformer Rated Power.....	341
14-2-2Nominal Frequency	342
14-2-3 Rated Voltage	342
14-2-4. Short Circuit Impedance of Transformer Uk%	342
14-2-5. Zero Sequence Impedance.....	342
14-2-6. Vector Group	342
14-2-7. Tap Changer	343
14-2-8. Tap Dependent Impedance	346
14-3. Tap Changer Basic Data in Load Flow	346
14-4. Single-Phase Transformer.....	350
14-5. D-d Connection (Delta-delta).....	351
14-6. D-d Connection (Auto Transformer)	352
14-7. Y-y Connection (Wye- wye).....	352
14-8. D-Yn Connection	352
14-9. Yn-D Connection	353
14-10. Three-Phase Transformer.....	354
14-11. Transformer Modeling	354
14-11-1. Positive and Negative Sequence Models	354
14-11-2. Tap Changer	355
14-11-3. Zero Sequence Model.....	355
14-12. Transformer Model in Load Flow Analysis.....	356
14-12-1. Tap Changer Model in Load Flow Analysis.....	356
14-13. Short Circuit Analysis.....	357
14-13-1. Input Data for S/C Calculation According to IEC S/C.....	357
14-13-2. Element Data for IEC S/C Calculations	357
14-14. RMS Simulation.....	358
14-15. Harmonic Simulation	358
14-16. EMT Simulation.....	358
14-16-1. Saturation Characteristic.....	358
14-16-2. Zero Sequence of Magnetizing impedance.....	361
14-16-3. Residual Flux.....	362
14-16-4. Stray Capacitors.....	363
14-17. Modeling in Details and Applicable Notes	363
14-17-1. Zero Sequence Models of Vector Groups	363
14-17-2. Model of YNyn/YNy/Yyn-transformer closed tertiary D winding	364
14-17-3. Model of YNzn/YNz/Zyn-transformer.....	365
14-18. Auto-transformer Model	365
14-19. Three-Winding Transformer	366
14-20. Modeling and Input Parameters	366
14-20-1. Positive and Negative Sequence Models	366
14-20-2. Positive Sequence Input Parameters.....	367
14-20-3. Zero Sequence Model.....	370
14-21. Power Factory Handling	371
14-22. Application of Three Phase Transformer in Power System.....	371
Chapter 15: Induction Machine Modeling	373
15-1. General Description	373
15-2. How to Select Motor.....	374

15-3. Motor Speed.....	374
15-4. Data Page of Induction Machine.....	374
15-5. Equivalent Rotor Impedance.....	374
15-6. RMS and EMT Simulations.....	375
15-7. EMT Model.....	376
15-8. RMS Simulation.....	377
15-9. Mechanical Equations.....	377
15-10. Mechanical Load.....	378
15-11. Motor Driven Machine.....	378
15-11-1. MDM type 1.....	378
15-11-2. MDM type 3.....	379
15-11-3. MDM type 5.....	379
15-12. Basic Data Dialogue Box for MDM.....	380
15-13. Doubly-Fed Induction Machine Model.....	381
15-14. Load Flow Studies for DFIG.....	381
15-15. Short Circuit Studies for DFIG.....	381
15-16. Harmonic Studies for DFIG.....	382
15-17. Transient Studies for DFIG.....	382
15-18. Rotor Protection.....	382
15-19. Motor Parameters.....	382
15-20. Load Flow for Induction Motor.....	386
15-21. Load Flow Input Dialogue Box for Induction Motor.....	389
15-22. Short Circuit Input Dialogue Box for Induction Motor.....	389
15-22-1. Short Circuit Analysis Page (IEC 61363).....	390
15-23. Harmonic Analysis for Induction Motor.....	391

Chapter 16: Synchronous Generator Modeling	393
16-1. General Description.....	393
16-2. Mathematical Description.....	394
16-2-1. Equations with stator and rotor flux state variables in stator.....	394
16-2-2. Mechanical Equations.....	394
16-2-3. Equations with stator currents and rotor flux variables.....	395
16-2-4. Saturation Equations.....	395
16-2-5. Simplifications for RMS-Simulation.....	396
16-3. Input Parameter Conversion.....	396
16-3-1. Reactances, Resistances and Time Constants.....	396
16-3-2. Saturation.....	397
16-4. Input-, Output and State-Variables of the PowerFactory Model.....	397
16-5. Rotor Angle Definition.....	398
16-6. Data Entry for Generator.....	399
16-6-1. Capability Curve or Power Chart.....	400
16-7. Data Entry for Dynamic Studies (EMT).....	403
16-7-1. Data Entry for Short Circuit Calculation with IEC 61363.....	404
16-8. Static Generator.....	405
16-9. Basic Data Tab in Static Generator.....	405
16-9-1. Zero/Negative Sequence Model.....	406
16-10. Load Flow Data for Static Generator.....	406
16-10-1. Local Voltage Controller.....	407
16-10-2. Static Generator as Slack.....	408
16-10-3. External Station Controller.....	408
16-10-4. Primary Frequency Control.....	409
16-10-5. Reactive Power Limits.....	409
16-10-6. Active Power Limits.....	409
16-11. Short-Circuit Calculations.....	409
16-11-1. VDEC/IEC Short Circuit.....	409
16-11-2. Complete Short Circuit.....	411
16-11-3. ANSI Short Circuit.....	412
16-12. Harmonics.....	413
16-13. RMS Simulation.....	413
16-13-1. Current Source Model.....	414
16-13-2. Voltage Source Model.....	414
16-14. EMT Simulation.....	415

16-14-1. Current Source Model	415
16-14-2. Voltage Source Model	415
Chapter 17: Overhead Line Models and Parameters	417
17-1. Introduction	417
17-2. Equivalent Circuit for Lumped Parameters	418
17-3. Single-Phase Line	419
17-4. Two-Phase Line	419
17-5. Three-Phase Lines	420
17-6. Three-Phase Line with Neutral Conductor	420
17-6-1. Data Conversion for The 4-Wires Model	421
17-7. Distributed Parameters Model	423
17-7-1. General Formulation	423
17-8. Models for EMT Simulations	424
17-8-1. Lumped Parameters Model	424
17-8-2. Distributed Parameters Model	425
17-9. Definition of Line In Terms Of Geometrical Data	430
17-10. Conductor Type	430
17-10-1. Geometrical mean radius (GMR) of a conductor	431
17-10-2. Bundle Conductor	432
17-11. Calculation of overhead line constants	432
17-11-1. Series Impedance	432
17-11-2. Internal Impedance	434
17-11-3. Earth Correction Term	435
17-11-4. Series Impedance Matrix	435
17-11-5. Shunt Capacitance	437
17-12. Numerical and Output Results	437
17-13. Impedance/Admittance Matrices Calculations and Tower Modeling	438
17-14. Defining Tower According to Electrical Data	441
17-15. Data Entry for Line Specifications	442
Chapter 18: Shunt and Series Compensator	444
18-1. Introduction	444
18-2. Shunt Compensator	444
18-2-1. Shunt Filter R-L	447
18-2-2. Shunt Capacitor	449
18-3. RLC Technology	451
18-4. RLC Technology with Parallel Rp	454
18-5. Series Reactor	455
18-5-1. General Description	455
18-5-2. Input Parameter	455
18-5-3. Input Mode of the Input Parameter	456
18-5-4. Reactor Equations	456
18-5-5. Series Reactor in Load Flow Study	457
18-5-6. Series Reactor in Short Circuit Study	457
18-5-7. Series Reactor in RMS Study	457
18-5-8. Series Reactor in EMT Study	458
18-6. Series Capacitor	458
18-6-1. General Description	458
18-6-2. Series Capacitor in Load Flow Study	458
18-6-3. Series Capacitor in Short Circuit Study	458
18-6-4. Series Capacitor in RMS Study	459
18-6-5. Series Capacitor in EMT Study	459
Chapter 19: Input/output Definition of the Network Equipment	460
19-1. Introduction	460
19-2. Parameter Definitions for Load Type (TypLod)	461
19-3. Parameter Definitions for Load Element (ElmLod)	462
19-4. Input Parameters of Load (TypLne)	463
19-5. Input Parameters of Conductor (TypCon)	465
19-6. Input Parameters of Geometric Tower (TypGeo)	465
19-7. Input Parameters of Tower (TypTow)	466

19-8. Input Parameters of Induction Machine (TypAsmo)	467
19-9. Input Parameters of Induction Machine (ElmAsm)	468
19-10. Input/Output Definition of MDM for Induction Machine	469
19-10-1. Stability Model (RMS)	469
19-10-2. EMT Model	469
11-19. Input/Output Definition of Dynamic Models for Doubly-Fed Induction.469	
19-12. Input/Output Definition for Synchronous Generator	472
19-12-1. Stability Model (RMS) for Synchronous Generator	472
19-12-2. EMT Model for Synchronous Generator	473
19-13. Input/Output Definition of Dynamic Models for Static Generator	474
19-13-1. Stability Model (RMS) for Static Generator	474
19-13-2. EMT Model for Static Generator.....	475
19-14 Defining Input Parameters of Static Generator (ElmGenstat)	476
19-15. Parameter Definitions of the Series Capacitor	478
19-16. Input/Output Definition of Dynamic Models for Series Reactor	479
19-16-1. RMS and EMT Model for Series Reactor	479
19-17. Input/Output Definition of Dynamic Models for 2W Transformer	480
19-17-1. Input Parameters of 2W Transformer (Type)	481
